Mechanistic insights into self-reinforcing processes in this process, tumor cells proliferate and secrete molecules that drive their communication with surrounding cells. In the fashion of a self-reinforcing loop, surrounding cells also proliferate and secrete new substances, which initiate new communications among themselves, with other noncancer cell types within the tumor (Figure 1). Figure 1. Self-reinforcing processes governing urban sprawl in the highest among European countries. Our assumption is that urban sprawl is a self-reinforcing process in Belgium, i.e., those places where sprawl tends to increase more are the ones where it was already strong in previous periods. Such behavior would have strong policy implications as it would self-reinforcing | Definition of self-reinforcing by self-reinforcing definition is - Tending or serving to strengthen itself: reinforcing itself. How to use self-reinforcing in a sentence. Explaining corporate short-termism: Self-reinforcing factors that under normal conditions would mitigate the self-reinforcing process among speculative investors, or prevent it from happening, relate to two mechanisms identified by Zuckerman (2012): (a) Arbitrage by non-speculative investors and (b) the public perception of the valuation metrics. Arbitrage (a) by non-speculative investors refers to investment opportunities pursued by investors who tend to care only about the fundamental long-term cash flow value of the investment targets. Self-reinforced polymeric materials: A review - Sciencedirect. A 1D self-reinforcing structure can be produced by extrusion molding whereby the extruder is equipped with a die having a convergent section (cf., Fig. 2). E Convergent section (with an angle of 45° or higher) is foreseen to generate the molecular orientation via extensional flow that is &quot;Frozen&quot; and in the subsequent sections of the die (Calibration zone). A micro level view of the self-reinforcement process a micro level view of the self-reinforcement process matreca s. I. James Jacksonville University. Mohamad Sepehri Davis College of Business Abstract. This study takes an in-depth look at self-reinforcement in order to probe deeper into the process of human behavior motivation and the path that leads to escalation of commitment. A recursive processes in self-affirmation: Intervening to because chronic evaluation is a key aspect of school and work environments, performance in these settings can be self-reinforcing. A recursive cycle, where psychological threat lowers performance, increasing threat and lowering performance further, in a repeating process, can magnify early performance differences among students (14). Can hierarchy hold back the dynamics of self-reinforcing of the model, the self-reinforcing processes actually lead into a lock-in. In the next step, we extend our model, introducing hierarchical power as a counterpart. Because we are interested in the comparative long-term effect of the two potentially rivaling regimes, we explore whether path dependence and lock-ins can also occur in the self-reinforcing | Definition of self-reinforcing by 3 psychology reinforcing a behavior by means of a self-administered reward or punishment; or relating to self-reinforcement. More generally: reinforcing or strengthening one's own existing feelings, ideas, or habits. Explaining corporate short-termism? Self-reinforcing these self-reinforcing processes constitute a mechanism by which these actors may have come to increasingly focus on short-term earnings. The authors propose that corporate managers' bias of

Self-reinforcing processes and organizational hierarchies

1. Introduction

Self-reinforcing processes in organizations refer to a phenomenon where an initial event or change leads to further events or changes that reinforce the initial event, creating a positive feedback loop. This can occur at different levels within an organization, from individual behavior to organizational strategy, and can have significant implications for organizational performance and stability.

2. Power and Status Hierarchies

Power and status are foundational elements of organizational hierarchies. Power refers to the ability to influence others, while status is a measure of social standing. These hierarchies are often hierarchical, with some individuals having more power and status than others. Self-reinforcing processes can arise from these hierarchies, as those at higher levels may have more opportunities to reinforce their power and status, leading to further increases in their influence.

3. Cumulative Causation

Cumulative causation is a type of self-reinforcing process where small changes lead to larger changes over time. For example, urban sprawl, a phenomenon that has been extensively studied, is often seen as a self-reinforcing process. As urban areas expand, they attract more people and businesses, leading to further growth and development. This growth then exacerbates the initial conditions, creating a positive feedback loop.

4. Environmental and Socio-Economic

Urban sprawl is not only a self-reinforcing process, but it also has significant environmental and socio-economic implications. It can lead to increased pollution, decreased biodiversity, and social inequality. Moreover, the effects of sprawl can be cumulative, with small changes in one area leading to large changes in another.

5. Conclusion

In conclusion, self-reinforcing processes are a critical aspect of organizational research. Understanding these processes can help organizations to better predict and manage their future trajectories. By recognizing the self-reinforcing nature of hierarchies, organizations can work to mitigate negative outcomes and leverage positive feedback loops for strategic advantage.
