Many landscape architects also use geographic information systems (GIS) which offer GPS coordinates of different geographical features. This helps landscape architects design different environments by providing clues on where to start planning and how to anticipate future effects of the landscape, such as rainfall running into a valley.

When planning landscaping projects, it’s important to understand that grading is design. Grading and site design are two highly related and dependent processes, and to achieve an appropriate final project, both must be integrated at the outset of a project. A change in grade must be purposeful, whether for functional or aesthetic reasons. In this course, we will cover the role of site engineering for landscape architects.

Site engineering for landscape architects is the top choice for site engineering, planning, and construction courses as well as for practitioners in the field, with easy-to-understand coverage of the principles and techniques of basic site engineering for grading, drainage, earthwork, and road alignment.

Site engineering for landscape architects is the top choice for site engineering, planning, and construction courses as well as for practitioners in the field, with easy-to-understand coverage of the principles and techniques of basic site engineering for grading, drainage, earthwork, and road alignment.
